

ure it stands for Paris. For romance. For artists and lovers and philosophers. But it also stands for the spirit of a century—a century of invention, exploration, and discovery. After all, Alexandre Eiffel built it to conduct experiments in aerodynamics, to test flight.  You know that spirit. Your mind can fly. And when it does, you need a printer that can keep up with you. Right there on the desk beside you. Not down the hall somewhere printing someone else's ideas. You need the Apple Personal LaserWriter 320. Ingenuity, standing by. 

### Apple Personal LaserWriter 320

This personal laser printer uses PostScript Level 2 with built-in FinePrint technology to give you smooth, crisp text and graphics. The PhotoGrade option provides 90 levels of gray, enhancing the

printer's 300-dot-per-inch resolution. This sample was printed with the PhotoGrade option on 24-pound Xerox Image Series LX paper, using Apple's Personal LaserWriter 300 Series Toner Cartridge.
